

THE FLIP DECK

36-card master prototype · 9 symbols · every pair exactly once · Set D “Glyphs” skin

PRINTING

Print at 100% scale (no “fit to page”) on A4 cardstock.

Page 1 (this page): print single-sided, or skip it.

Pages 2–9: print DOUBLE-SIDED, flip on LONG edge.

Check duplex alignment by holding a sheet up to the light;
the 4 mm frame inset forgives a couple of millimetres of drift.

Cut along the dashed guides: 9 cards per sheet, 36 total.

Standard 63.5 × 88 mm sleeves fit. Opaque sleeves are wasted
here — there is no card back. Both sides are faces.

THE DECK

Each card carries one glyph on each side; every possible pair
of the nine glyphs appears on exactly one card ($36 = 9 \times 8 \div 2$).

Shape is rank: count the sides. Pips 1–9 sit in two corners of
every face, identically placed — no mark on any card reveals
which of its two faces you are looking at.

Games for fewer symbols use a subset: glyphs 1–6 (15 cards),
1–7 (21) or 1–8 (28) form exact smaller all-pairs decks.

SORTING AFTER PLAY

To verify the deck: lay cards in rows by their lower glyph —
row 1 holds 1+2 ... 1+9 (eight cards), row 2 holds 2+3 ... 2+9
(seven), and so on. A missing card names itself.
